HCL Volt MX

Beautiful apps. Transformation delivered.

Volt MX is an industry-leading low-code app-dev platform that empowers professional developers, enterprise architects, and digital designers to rapidly deliver multiexperience, consumer-grade apps. Our low-code approach improves developer productivity, creates better app experiences more cost effectively, and helps you build innovative experiences that meet the evolution of customer expectations.

Capabilities	Benefits	Value
Build once. Deploy everywhere.	Deliver consumer-grade apps across multiple channels in the form of progressive web apps and native mobile apps — and across any device, even wearables and kiosks — on one cloud-native platform.	Your internal dev teams don't have to become experts on iOS, Android, or any available platform. Using a single code base, build amazing apps with no limits on user experience, at any scale and complexity.
Integrations without limits.	HCL Volt MX provides a set of powerful back-end runtime services that enables the use of connectors to quickly integrate data, create new services, and configure back-end business processes.	Our secure integration capabilities hide all the backend complexity, helping developers connect diverse systems and data sets easily and efficiently.
Innovative interactions provide meaningful engagement.	HCL Volt MX provides a single platform that supports AI and machine learning in conversational apps, wearables, VR and AR experiences, and more.	Captivate users and stay ahead of the competition by incorporating advanced technologies that drive adoption, engagement, and retention.
App delivery — fast.	Our low-code development environment provides rapid, visual assembly and pre-built backend services so you can build robust solutions in weeks instead of months.	Achieve more than 60% reduction in time to market — this means faster innovation and lower TCO. Your IT teams can focus on the next higher-value organizational opportunity.
Build and manage business processes with ease.	Design business rules, involve third-party services, automate basic decisions, write complex logic, incorporate human interaction, and more.	Our low-code approach to visually building back-end business processes makes managing complex workflows simple.
Built-in analytics.	Turn data into strategy. Our customizable dashboards come with custom and prebuilt analytics including reports on device and app usage, policy compliance, and user journey event tracking.	Get insight to how your audience is engaging with your app. Make data-driven decisions to build smarter business strategy and continue to improve and iterate.
Effortless security.	HCL Volt MX's security defends against compromise, detects, and reacts to attack. Get data and identity protection with enterprise-grade security certifications	A single click enables multi-layered security for both the client application and back-end services.
Automated testing and DevOps.	HCL Volt MX comes with automated testing capabilities that easily integrates with your existing infrastructure.	Reduce time and effort spent on testing. Developers instead can focus on new apps and features with greater speed and ability.
